

Passerelle Coach

Release Notes v3.2

General

Main New Features

- Extra measures have been taken to prevent Passerelle Coach emails from ending up in spam

Bug Fixes

- Fixed issue with thumbnails still appearing in call history and report after having refused data consent
- Fixed issue when an invited users stops a call when data storage was not allowed
- Fixed issue where phone/e-mail of invited users was not stored in the database
- Fixed issue with ending a call when data storage was disabled/denied
- Fixed issue with connectivity/availability after network switch (e.g. wifi to 4g)
- Fixed issue with missing feedback after invited user enters a new password that doesn't meet the password rules

Admin Web Application

New Features

- Added support for enabling call report on a user base
- Added support for configuration of call report e-mail recipient(s) per site
- Added new settings option for disabling data storage (without presenting a data consent dialog to guest users)
- Allow to cleanup call records which are older than certain number of days. In settings you can enable this feature and set the number of days

Enhancements

- Completely restyled/reorganized admin UI
- An admin can now reset 2FA for other users (e.g. in case someone loses his phone)
- Top 10 users in insights now only shows registered users (not guest users)
- Improved insights report layout

Bug Fixes

- Only enterprise admins are now allowed to rename user groups
- Title changed to 'Passerelle Coach Admin' iso 'Passerelle Coach'

Desktop/Mobile Web Application

New Features

- Added support for enabling call report for a user
- Added support for remote camera switch when connected to Iristick smart glasses

Enhancements

- Desktop app window will no longer go to background when it's not focussed and there's an incoming call
- The desktop app's incoming call popup no longer shows empty image as avatar if the file is no longer available
- Recent contacts are now sorted by date (descending)

Bug fixes

- Fixed issue where the user could not draw without selecting a tool after switching between laser pointer and annotation mode
- Fixed typos and capitalization of some words in the activity logging
- Fixed issue with logo size to avoid bottom menu overlay
- Fixed issue where mic icon resets to unmuted after switching to annotation mode
- Fixed issue where no default pointer color was selected after connection

- Fixed issue with some notifications that could not be closed in desktop application
- Fixed issue with short authentication expiration time (increased)
- Fixed issue with inconsistent annotation canvas size vs incoming stream resolution
- Fixed issue with sign out causing web application to hang
- Fixed issue with accepting a forwarded call after first having refused it
- Fixed issue with forwarding to a user who participated in the call before
- Fixed issue when both parties in turn forward to the same user
- Fixed issue with incorrect view state after a participant left a forwarded call while still streaming video
- Fixed issue with reconnecting to a call
- Fixed issue with missing tracing (chat/activity) of shared picture at receiving side
- Fixed issue with view state when sharing a picture while no camera is active
- Fixed issue where the camera stream is shown twice
- Fixed issue with white screen in the windows application (firewall/proxy related)
- Fixed issue with streaming high resolution pictures
- Fixed issue with being unable to receive calls after ending a call with recording disabled

Known issues

- There's currently a known issue on iOS browsers and MAC Safari browser that causes images to be distorted or rendered completely in black.

Mobile Android Application

New Features

- Added support for enabling call report for a user
- Added support for call forwarding
- Added support for remote camera switch when connected to Iristick smart glasses
- Added support for media library picture streaming
- Invited users are now added to recent contacts (cfr web app)

Enhancements

- Implemented in-app google play update
- Implemented custom scrolling voice commands for Iristick smart glasses
- Automatic authentication after android device is (re)started

Bug fixes

- Fixed issue with state synchronization when both parties toggle their cameras at approximately the same time
- Fixed issue with stopping AR annotation mode
- Fixed issues with incoming calls when phone is locked or the app is in the background
- Fixed issue with access token not refreshing when a call for a registered user was started via an invitation
- Added check for bluetooth availability and permissions to avoid potential crash when attempting to connect a bluetooth headset
- Fixed issue with incomplete voice help commands when selecting a contact

Technical

Changed minimum supported Android version from Android 5.0 to Android 7.0. The current install base does not contain any devices lower than Android 9 so there is no impact.
